

## Mini Mobile Media - Front & Rear Cabin solutions

In the UK, BMW have seen fit not to offer TV as an option for their new MINI – customers who have purchased the MINI navigation system have therefore been left without an option of selecting an additional source.... until now!

Our various MINI packages use a combination of BMW components and break-through proprietary technology to link into the BMW I-BUS digital 'infotainment' system.

This system adds TV and additional source functionality to the standard 5.8" widescreen, and appears to all intents and purposes like a standard BMW fit product. (In Japan, this is a standard BMW fit product!). We retain all the standard fitting and mounting positions, and the system is entirely hidden from view, except when in operation!

Pictured above is a PS2/DVD driven installation into MINI navigation system.

Pictured above: PS2 installation in MINI glovebox

Our most popular installation for the MINI is based around the Sony PS2 DVD/Games console – the most cost-effective route to providing effective dual-source media.

Our system provides full BMW television functionality, A/V switching to additional sources and incorporates modifications which allow the system to remain active while the vehicle is in motion.\*

All of our work is characterised by a genuine passion for audiovisual excellence, and a rare eye for innovative, discreet detailed design. Whatever your interest, we would welcome the opportunity to demonstrate examples of our work, discuss your requirements, and provide guidance where required.

\*Not for use on public highways.
