

## Sport Final Drive Covers

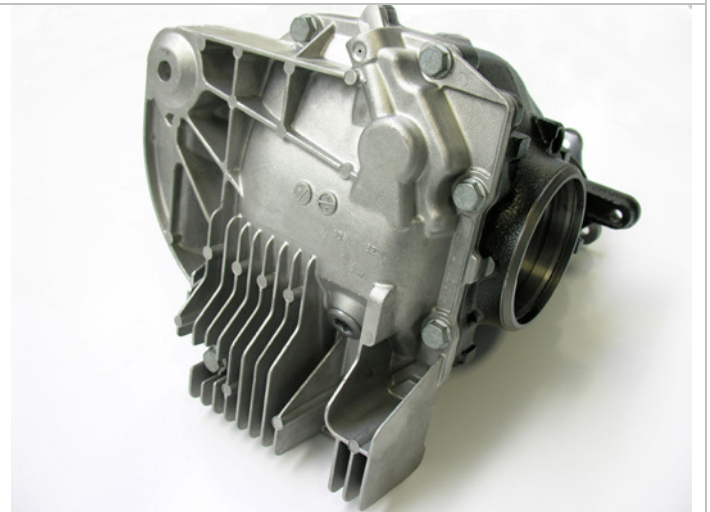

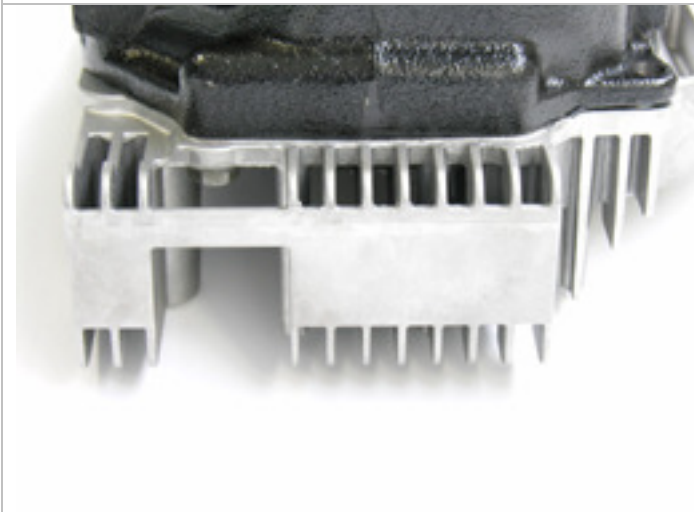

Do you use your BMW for track days and endurance events?

Even though some of the "small" BMW cars are capable of delivering huge performance, BMW deem it satisfactory to provide very little cooling for their final drives. Of course all M-Power cars come adequately equipped as standard.

Vigorous use of your BMW can cause damage and failure to deliver performance. The must-have Quaife limited-slip differential in your BMW is one of the most robust and reliable components in your car. This incredible device improves acceleration, cornering speeds, handling and steering all at the same time. However in situations where the driver is "on it" for extended periods, the build up of heat can deteriorate the performance of the Quaife, and possibly accelerate wear and tear of all other components.

Birds have developed a new Final Drive Cover/Cooler especially designed to cool your differential and maintain delivery of maximum performance. This is a must-have for track day and endurance events. The additional cooling area is a calculated 240%, and guaranteed to keep the differential, bearings and gears within temperature limits.

These kits are available for all E87 and E90 variants.
