Hartge Stainless steel rear silencers

Hartge exhausts are designed for the life of the car. Stainless steel is employed in all current model systems, whether a rear silencer or a complete system including metal catalysts and manifolds. Sport exhausts are primarily utilised in maximising the power output from the engine, but they also play a vital part in liberating a richer, deeper and a more sporty sound. All systems comply with noise legislation, and do not cause intrusive noise into the cabin.

In these days of overzealous environmental awareness, the tonal quality of the standard exhaust is virtually absent. The Hartge exhaust performs an important role in creating an aural quality that is, to the enthusiasts ear, pure music.

HARTGE stainless steel rear silencer with dual round tail pipes (diameter 90 mm) left and right, with ABE homologation for F07 535i GT and 530d GT. The package includes a revised rear valance in PU Rim. This can optionally be painted in the body colour.
